Staff report
First team

Week 10 · 2–8 March 2026

KEY POINTS

- **Two players to watch**: Ferreira, risk rising to 72, and Lindqvist, load at an ACWR of 1.52.
- **88% of the squad available** on Sunday: 3 players returning, no new injury.
- **Partial data**: 18 of 24 players scored, sleep not collected.

SUMMARY FOR THE STAFF

Two players to watch: Ferreira and Lindqvist

Injury risk is rising for Malik Ferreira (62.1 on average) and collapsed for Tom Lindqvist after 5 March, while his load jumped. No other player averages above 20.

Mean performance	Mean injury risk	Mean total distance
50.5 / 100	**9.4** / 100	**2,899** m
18 players scored, 2–8 March	3 injured, all returning	per session, 19 outfield players tracked

To watch

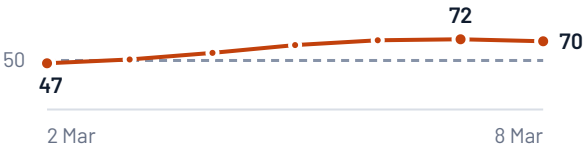

Daily injury risk, 0 to 100 scale

Malik Ferreira

Forward · 4 GPS sessions

62.1
mean risk

↑ RISING SINCE 3 MARCH

From 51 on 3 March to 72 on 7 March. Weekly load close to the forwards' (2,940 m vs 2,905 m).

Full sheet, page 10

Tom Lindqvist

Winger · 3 GPS sessions

45.0
mean risk

↓ BREAK ON 6 MARCH

Plateau around 68, then a drop to 18 on 6 March. Load well above the wingers' (4,020 m vs 3,060 m).

Load and ACWR, page 5

Three findings

1

Risk is concentrated on two players

Of 18 scored players, only Ferreira (62.1) and Lindqvist (45.0) are above 20.

2

Attacking midfielders carry the load

3,210 m per session, including 580 m of HMLD: highest in the team. Sample of 4 players.

3

Data to complete

18 of 24 players scored. No sleep or strength tests this week.

A team-wide dip on Friday

Mean performance drops to 40.4 on 6 March, against about 50 on the other days.

Isolated spikes, no follow-up

Osei at 49 on 2 March, then close to 0; Kowalczyk at 31 on 6 March.

Moreau, steady but above the group

Between 16 and 19 every day: third-highest risk in the squad, far behind the top two.

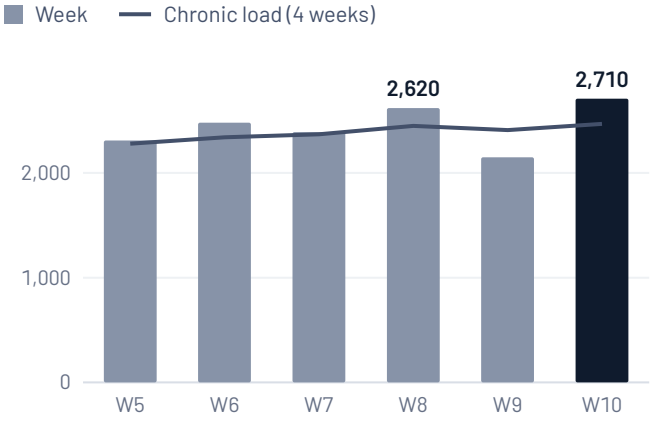

LOAD AND ACWR

Lindqvist leaves the safe zone: ACWR of 1.52 this week

His load over the last 7 days is 52% above his average of the previous 4 weeks. The rest of the team stays in the zone, except Osei (1.34).

Team load

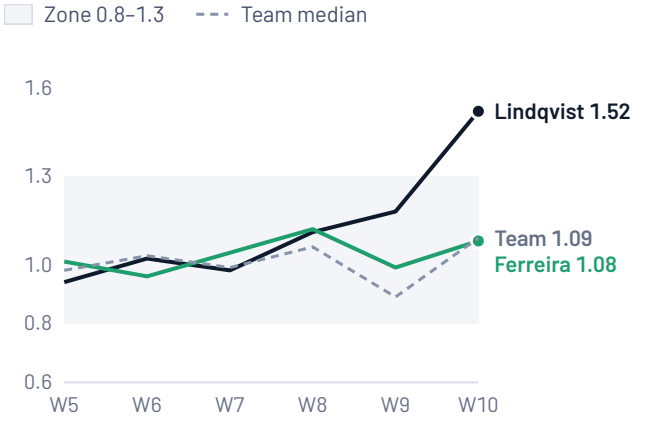

sRPE, arbitrary units

Sum of reported loads per week, squad average. Week 10 is the heaviest since W5.

ACWR by week

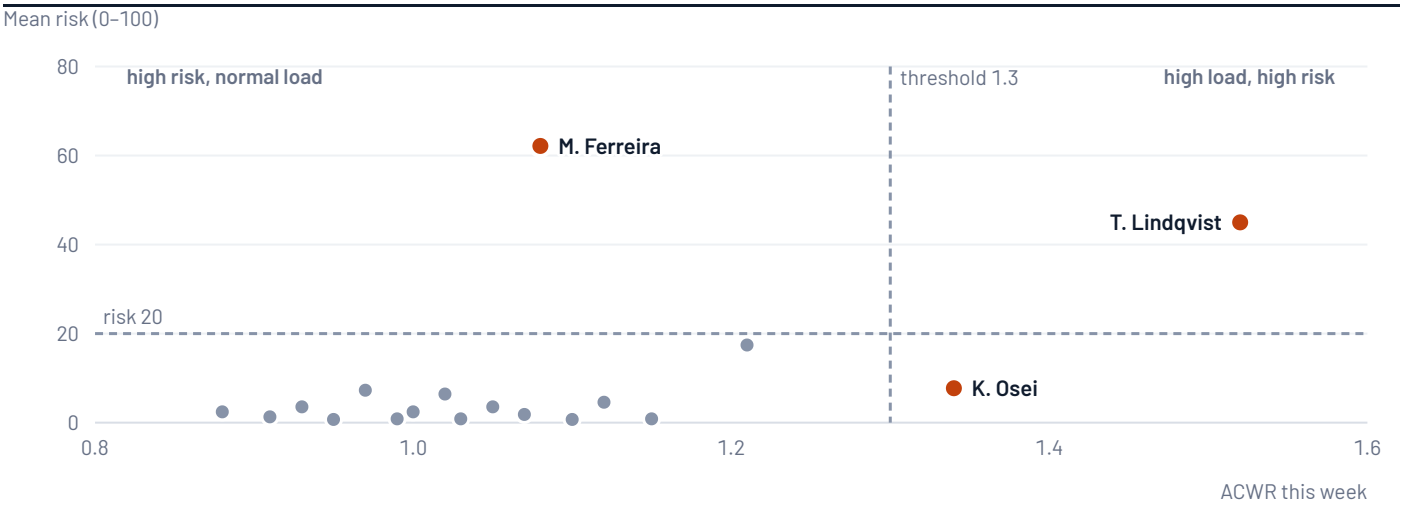

acute / chronic

Above 1.3, recent load is well above the usual load.

Load and risk, player by player

18 scored players, week 10

2 players above 1.3. Lindqvist's risk fell while his load rose: the model does not tie his risk to load alone.

To check with the medical staff. Ferreira's high risk is not explained by his load (ACWR 1.08). The other model factors are on page 11.

GPS EXTERNAL LOAD BY POSITION

Attacking midfielders carry the load, defensive midfielders stay far behind

Means per session and per player over the week, 19 outfield players. The dashed line is the team mean; the leader on each measure is dark.

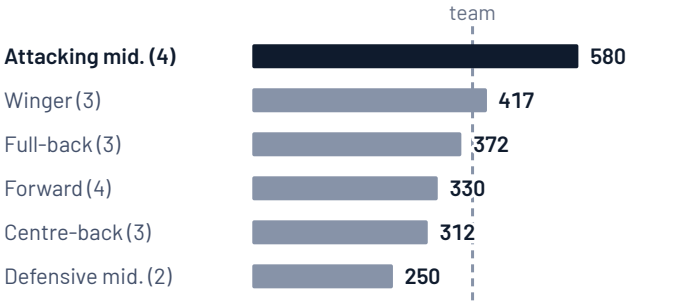

Total distance

metres

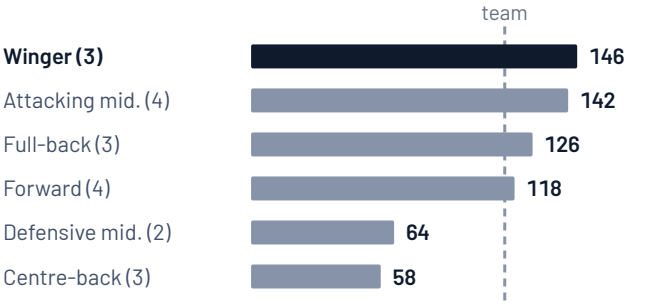

HMLD

metres

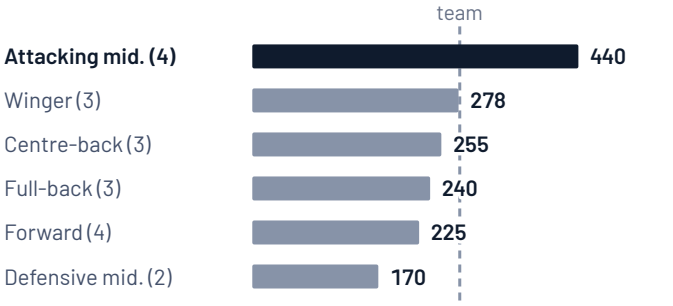

High-speed running

metres

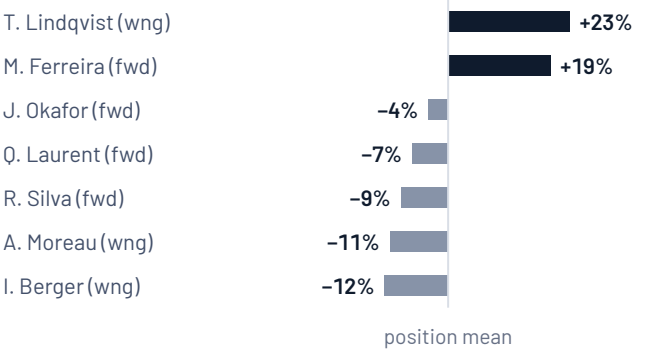

Explosive distance

metres

HMLD, gap to position

forwards and wingers

Ferreira and Lindqvist above their position

+19% and +23% HMLD: the two players to watch are also the most loaded in their line.

Careful with small groups

Two defensive midfielders, three wingers tracked: one player moves the mean a lot.

Reading. HMLD: high metabolic load distance. Goalkeepers are excluded.

REPORTED WELLNESS

Fatigue rises late in the week for six players, never above 8

Morning questionnaire, scale from 1 (very good) to 10 (very bad). Two measures collected this week: fatigue and soreness.

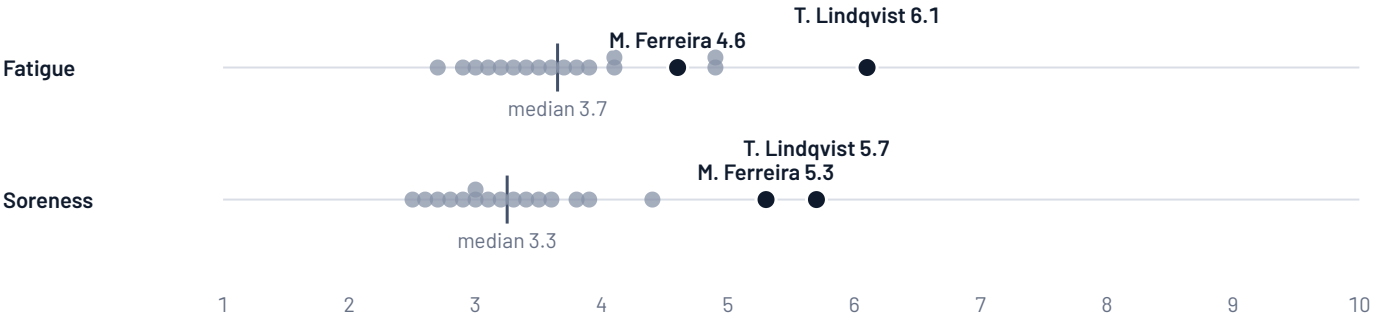

Fatigue, the six highest players

1 to 10, higher = more tired

Weekly mean, 18 players

one dot per player

Lindqvist, the most tired in the team

6.1 on average, peak of 8 on 6 March.

Ferreira reports soreness

5.3 on average, second in the team, while his fatigue stays average.

Sleep and stress: not collected this week. No analysis produced for these two measures.

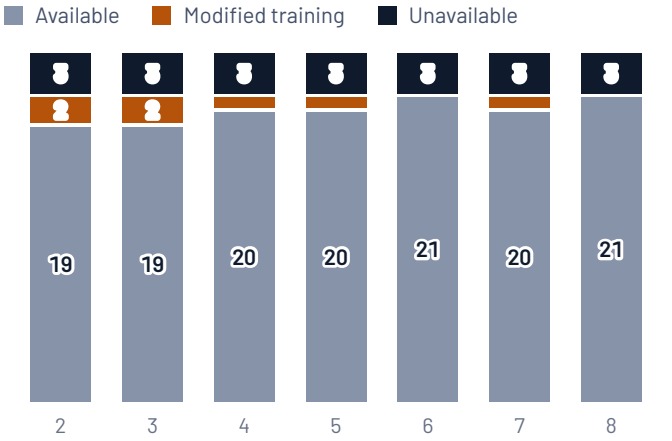

SQUAD AVAILABILITY

Three players out all week, all in their return phase

Squad of 24 players. No new injury since 23 February; Laurent, recovered, rejoined the group in week 6.

Status by day

number of players

Available on Sunday

21 / 24

88% of the squad

Modified training

Y. Diallo	Ankle sprain	19	Reconditioning	week 12
M. Costa	Adductors	12	Individual return	week 11

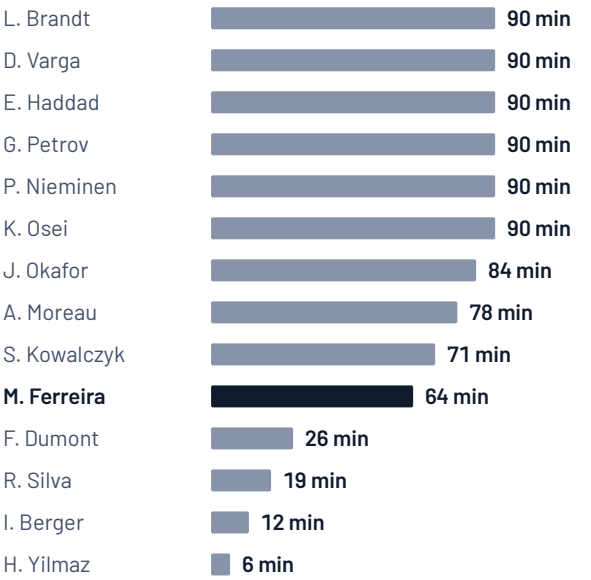

MATCH · MATCHDAY 26, SATURDAY 7 MARCH, WON 2-1

Ferreira substituted after 64 minutes, Osei covers the most ground

14 players used. Physical match data for the 10 tracked starters; substitutes who came on after 70 minutes are not measured.

Minutes played

minutes

Ferreira in dark: substituted after 64 minutes, a tactical change according to the team sheet.

Physical output

tracked starters

Player	Distance (m)	HSR (m)	Sprints	Top speed (km/h)
K. Osei	11,840	912	24	31.2
P. Nieminen	11,210	604	12	28.4
E. Haddad	10,960	1,018	29	33.1
G. Petrov	10,720	944	26	32.6
J. Okafor	9,980	822	22	32.9
L. Brandt	9,720	402	9	29.8
D. Varga	9,640	388	8	30.2
A. Moreau	9,410	860	25	33.4
S. Kowalczyk	8,860	655	17	30.1
M. Ferreira	**7,120**	**590**	**18**	**32.2**
Mean	9,946	720	19	31.4

Sorted by distance. Ferreira played 64 minutes: his volumes are not comparable with those of 90-minute players.

Haddad, the most explosive

1,018 m at high speed and 29 sprints, the team's best in the match.

Ferreira, intense over 64 minutes

18 sprints, or 25 per 90 minutes: on par with the wingers.

One match this week

No comparison with a previous match is possible within the requested period.

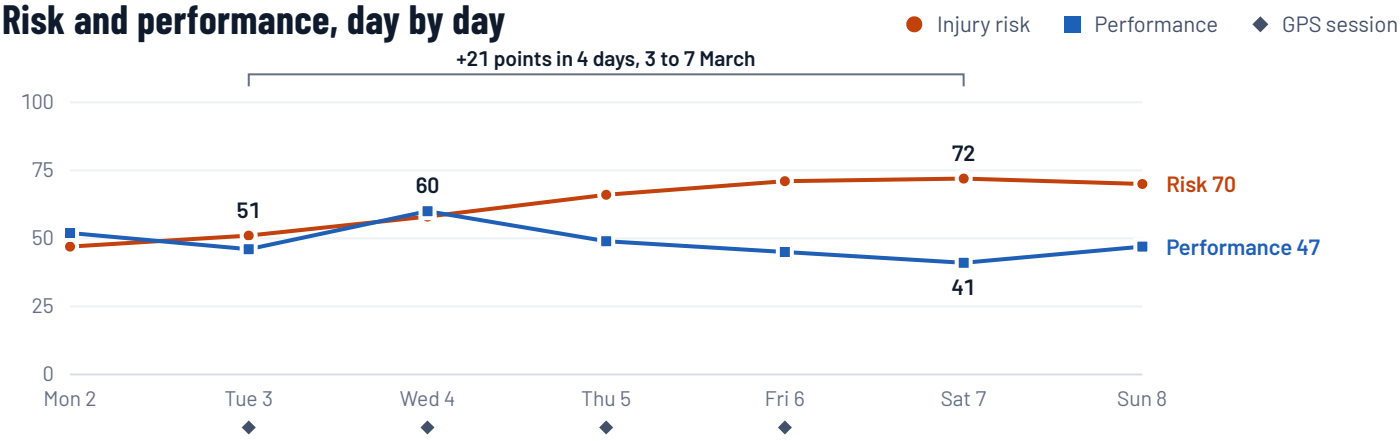

PLAYER SHEET · FORWARD

Malik Ferreira: risk rising since 3 March

The risk score goes from 51 to 72 in four days, then holds a plateau around 70. Performance does not follow: it moves between 41 and 60.

Mean risk	Peak risk	Mean performance	GPS sessions
62.1	**72**	**48.6**	**4**
highest in the squad	on 7 March	between 41 and 60	3 to 6 March

Risk and performance, day by day

Daily scores from 0 to 100. Values shown are the start and peak of the rise, and the performance extremes.

GPS sessions

Session	Distance (m)	HMLD (m)	HSR (m)	Explosive (m)
3 Mar	2,290	180	52	130
4 Mar	3,110	498	204	296
5 Mar	3,180	532	141	372
6 Mar	3,180	362	113	248
Mean	**2,940**	**393**	**128**	**262**

HMLD: high metabolic load distance. HSR: high-speed running.

Against the forwards

Measure	Ferreira	Position	Gap
Distance (m)	2,940	2,905	+1.2%
HMLD (m)	393	330	**+19.1%**
HSR (m)	128	118	+8.1%
Explosive (m)	262	225	**+16.2%**

Position: mean of the 4 forwards over the week. Gaps of 10% or more in bold.

WHAT THE DATA SHOWS

The sessions on 4 and 5 March carry the intensity (HMLD 498 and 532 m) and come before the risk plateau. Total volume stays within the position mean.

OPTIONS FOR THE STAFF

Adjust explosive distance in the next sessions and cross-check with reported soreness (5.3 out of 10 this week).

DATA AND METHOD

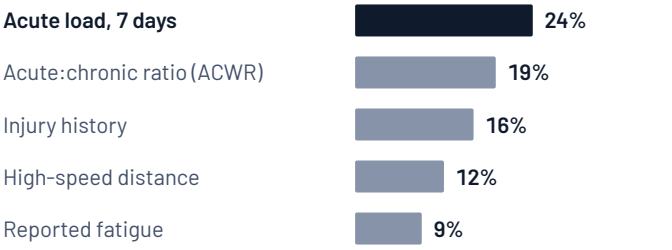

What the numbers cover, and what they do not

Every value in the report comes from the sources below, over 2 to 8 March. Nothing is estimated when data is missing.

Domain	Status	Players	Period	Source or note
Risk and performance scores	● Complete	18 / 24	2–8 Mar	MAUNA model
GPS	● Complete	19 / 22	2–8 Mar	Club sensors
Wellness	◐ Partial	18 / 24	2–8 Mar	2 of 5 questions
Injuries	● Complete	4 records	since W3	Medical department
Match	◐ Partial	10 / 14	7 Mar	Starters only
Sleep	○ Missing	0	—	Not collected
Strength tests	○ Too old	20 / 24	12 Feb	Outside the period

What drives the risk

share explained, %

Top five model factors across the squad, week 10. The rest is spread over 14 other factors.

Definitions

Injury risk (0–100)

Relative likelihood of injury within 7 days, estimated each morning. It is not a diagnosis.

Performance (0–100)

Daily physical readiness index; 50 is the player's usual average.

ACWR

Load over the last 7 days divided by the weekly average of the previous 4 weeks.

Not produced in this report. Sleep analysis (no data); strength tests (last test on 12 February, outside the period); comparison with last season (not requested).

APPENDIX A

GPS by player, week 10

Means per session. Players grouped by position, sorted by total distance. Goalkeepers excluded. HMLD gap to the position mean; 10% or more in bold.
