Individual Athlete Profiles

Executive Summary

> *Individual load, GPS intensity, and cardiac recovery profiles across the squad during the training week. Wellness data shows partial coverage with energy ratings.*

- Internal load (sRPE) ranged from 239 AU (Hugo Robineau) to 666 AU (Nathan Soliman), reflecting varied training participation and session intensity across the roster.
- GPS movement load spanned from Hugo Robineau to Trey Woodbury, with Trimp values indicating differentiated external load exposure.
- Cardiac autonomic recovery (RMSSD) varied from 7 ms (Trey Woodbury) to 20 ms (Hugo Robineau). Lower RMSSD values in high-load athletes suggest reduced HRV.
- Tyger Campbell and Nathan Soliman recorded the highest internal loads without GPS data for Campbell, warranting attention to recovery adequacy.
- Hugo Robineau and Tyson Walker showed the lowest internal and external loads, possibly reflecting modified training or reduced session participation.
- Wellness data coverage was partial with body soreness rating having no entries and energy rating showing a default pattern.
- No match statistics were recorded during this training week.

LOAD OVERVIEW

- Internal load (sRPE) averaged 465 AU across the squad, with a range from 239 AU (Hugo Robineau, Tyson Walker) to 666 AU (Nathan Soliman).
- Tyger Campbell and Nathan Soliman recorded the highest internal loads, while Hugo Robineau and Tyson Walker had the lowest.
- Load distribution reflects varied training participation and session intensity across the roster during the week.

GPS INTENSITY

- GPS movement load ranged from Hugo Robineau to Trey Woodbury, with Trimp values showing varied external load exposure.
- Trey Woodbury, Keith Jordan, and Adrian Nelson recorded the highest external loads.
- Hugo Robineau and Antony Labanca showed the lowest GPS outputs, possibly reflecting modified training.

MATCH ACTIVITY

No match statistics were recorded during this training week.

WELLNESS & RECOVERY

- Cardiac autonomic recovery (RMSSD) varied from 7 ms (Trey Woodbury) to 20 ms (Hugo Robineau).
- Athletes with high training loads (Trey Woodbury, Nathan Soliman, Antony Labanca, Assemian Moularé) showed reduced RMSSD values, indicating reduced HRV.
- Wellness data coverage was partial with body soreness rating having no entries and energy rating showing a default pattern.

PLAYERS TO WATCH

Trey Woodbury

Highest GPS load with lowest RMSSD — monitor recovery closely.

Nathan Soliman

Highest internal load with reduced RMSSD — elevated volume with reduced HRV.

Tyger Campbell

Highest internal load without GPS data — review session participation and recovery.

Antony Labanca

Lowest GPS output but reduced RMSSD — low external load with reduced cardiac recovery.

Assemian Moularé

Above-average load with reduced RMSSD — elevated training with reduced HRV.

Hugo Robineau

Lowest internal and external loads with highest RMSSD — modified training or reduced participation.

TYGER CAMPBELL

Week average sRPE 660 AU, highest in the squad. GPS data not available this week. High internal load warrants attention to ensure adequate recovery and readiness for upcoming sessions.

Measure choice: srpe_daily (domain priority), movement_load (primary load), trimp (intensity), rmssd (HRV) — first matching vendor aliases present in club datasets.

KPI — sRPE daily: 660
