Executive Summary

Individual athlete monitoring across GPS, wellness, and match domains for the Bourg-en-Bresse squad during the week of 7–14 October 2026. The week captured 45 GPS sessions across 11 players with moderate training loads and stable wellness metrics across the squad.

1. GPS OVERVIEW

45 GPS sessions captured across 11 players during 7–14 October. Movement load typically 180–240 units per session, with peaks mid-week for several athletes. TRIMP values 85–115 indicate moderate cardiovascular demand. Heart rate variability stable at 40–55ms across all monitored players.

2. MATCH ACTIVITY

No match data available for the period 7–14 October 2026.

3. WELLNESS OVERVIEW

63 wellness entries logged across 12 players during the week. Mood ratings consistently 4–5/5 (higher is better), indicating positive mental state. Stress management effective, with most players at 3–4/5 (higher is better). Wellbeing ratings stable at 4–5/5 throughout the week. Wellness scales: Mood, Stress, Wellbeing, and Energy rated 1–5 (5 is best).

4. OUTLIERS & WATCH LIST

Tyson Walker

Point guard with minimal GPS data this period (no sessions recorded). Only 2 wellness entries logged. Insufficient data density to assess training load patterns. Recommend monitoring data capture compliance.

Hugo Robineau

Shooting guard with limited GPS exposure this week (only 2 sessions on 8th and 13th). Movement load 180–220 when recorded. Wellness logging also sparse. Consider reviewing training participation or data capture.

Tyger Campbell

Point guard with lighter GPS exposure (4 sessions recorded). Movement load 180–220, TRIMP 85–105. Wellness stable but limited data points. No adverse signals in available metrics.

5. INDIVIDUAL ATHLETE SHEETS

Kadin Shedrick Center (C)

Summary

- Center with consistent GPS activity: movement load 180–240 units
- RMSSD stable 40–50ms; TRIMP 90–115
- Mood 4–5/5, stress 3–4/5, wellbeing dipped mid-week (3/5 on 10th) but recovered
- Energy steady at 4/5; overall stable profile

6. DATA CAPTURE & RELIABILITY

Coverage Notes

- GPS: 11 of 12 athletes with recorded sessions; Tyson Walker had no GPS data
- Wellness: 12 of 12 athletes logged at least one entry
- Hugo Robineau and Tyson Walker had limited GPS exposure (0–2 sessions)
- Energy rating showed potential default-value pattern (approximately 42% at 4/5)
- Zone 5 time appeared stuck at zero for approximately 78% of GPS sessions
- Body soreness rating column empty across all wellness entries
- Coverage shortfall: 3/12 players — not a complete roster report
