Comprehensive staff briefing covering performance and injury risk scores, wellness (soreness, mood), sleep quality, and clinical injuries for December 2025. Load and GPS data unavailable; biomarkers (CK) not captured.

NARRATIVE THREAD

- Performance scores averaged 53.5 across 617 observations during December, with team mean showing moderate stability and a range from approximately 40 to 65 throughout the month.
- Injury risk scores remained low, averaging 5.1, with minimal daily variation and a narrow band between 3 and 8 across the squad.
- Body soreness ratings averaged 26.8 on the 10–60 scale (lower is better), indicating generally good recovery status. Daily team means ranged from approximately 24 to 30, with a slight elevation in early December.

SIGNALS

WATCH Yussuf Poulsen and Silvan Hefti showed elevated body soreness (40 and 38 respectively on December 19), worth monitoring alongside their latest injury risk and performance scores.

Yussuf Poulsen · wellness

WATCH Silvan Hefti reported elevated soreness (38) on December 19 with mood at 22, suggesting potential recovery needs.

Silvan Hefti · wellness

REVIEW GPS training load monitoring was unavailable throughout December despite session records, limiting external load visibility for staff.

- All six injuries recorded in December have recovered status. The dataset shows predominantly muscle fiber tears with no-contact mechanisms, though these default values suggest limited injury detail capture during this period.

INJURIES

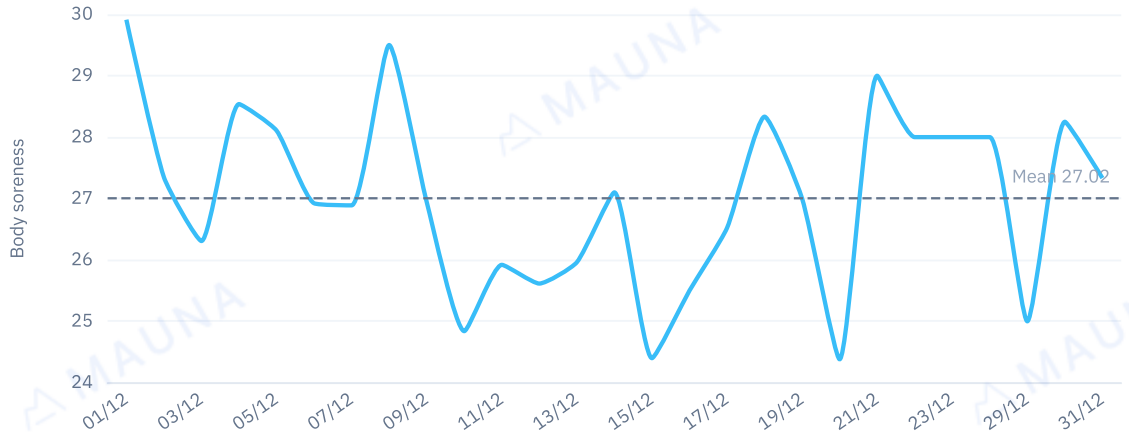

2025-12-01 → 2025-12-31

- Club subjective scales: body soreness and sleep quality range 10–60, where lower values indicate better state (10 = minimal soreness / excellent sleep; 60 = high concern). Mood follows the same 10–60 scale with lower being better.
