COACH BRIEF

Fait moi un rapport du 1 er au 14 mars,
Fait moi un bilan global de certaines données pour presenter le contexte, puis un focus sur la performance de l'équipe avec leurs scores et les données qui influence ce score , et flag moi trois joueurs, deux joueurs avec une baisse la performance sur la trend de la période et un avec une hausse et trouve la correlation d'ou ca vient. Fait ensuite la meme chose avec les risques de blessures . Fait ensuite une analyse general de la wellness, et des biomarkers

HAMBOURG STAFF REPORT

Performance & Risk Monitoring

March 1–14, 2026 · 24 players · 14 days

Coach brief: Global context overview for March 1–14, team performance analysis with scores and influencing factors, flag 3 players (2 declining, 1 rising) with correlation analysis. Same approach for injury risk. General wellness and biomarker analysis.

GLOBAL CONTEXT – MARCH 1–14

PERIOD OVERVIEW

24 players monitored over **14 days** with performance and injury risk scores tracked daily. Squad performance scores ranged 45–66 (period average), with **Bakery Jatta (65.9)** and **Nicolás Capaldo (65.3)** leading. Injury risk scores ranged 0.5–57, with **Yussuf Poulsen (57.0)** showing sustained high risk throughout the period.

TRAINING LOAD	GPS DISTANCE	TOP PERFORMANCE	HIGHEST RISK
102k	39.5 km	65.9	57.0
Bakery Jatta (Feb 1–Mar 14)	Noah Katterbach (Mar 1–14)	Bakery Jatta (avg)	Yussuf Poulsen (avg)

KEY METRICS SUMMARY

- **Training load (sRPE Feb 1–Mar 14):** Bakery Jatta 102k, Damion Downs 86k, Daniel Elfadli 78k highest totals.
- **GPS volume (Mar 1–14):** Noah Katterbach 39.5 km, Albert Grønbæk 35.3 km, Fabio Baldé 35.7 km top distance.
- **Wellness stable squad-wide:** soreness 13–39, mood 10–35, sleep quality 14–38 (period averages).
- **Biomarkers limited:** 8 measurements across 4 players; CK 380–520 U/L (moderate muscle stress), testosterone 18–22 nmol/L (normal).

TEAM PERFORMANCE ANALYSIS

PERFORMANCE SCORE OVERVIEW

Team performance scores reflect daily readiness and output. **Top performers:** Bakery Jatta (65.9), Nicolás Capaldo (65.3), Ransford Königsdörffer (60.6). Performance trends show Nicolás Capaldo rising (EWMA7 53→67), while Damion Downs (49→45) and Albert Sambi Lokonga (59→49) declined.

FLAGGED PLAYERS – PERFORMANCE TRENDS

↓ Decline **Damion Downs**

Performance EWMA7 declined **49→45** over the period. Correlation analysis shows **load spikes Mar 10–13** (DSL 47–103) with stable wellness (soreness 31–40). The decline appears driven by **accumulated training stress** without corresponding wellness deterioration, suggesting load management may be needed.

DATE	PERF EWMA7	DSL	SORENESS	MOOD	SLEEP
2026-03-01	49	—	33	31	38
2026-03-02	45.75	—	—	—	—
2026-03-03	45.81	—	40	33	40
2026-03-06	43.28	26.3	37	33	37
2026-03-10	45.25	47.5	31	32	33
2026-03-11	46.18	102.8	33	32	37
2026-03-12	46.89	40.7	38	32	37
2026-03-13	47.92	72.2	35	33	37
2026-03-14	47.94	—	34	32	38

↓ Decline **Albert Sambi Lokonga**

Performance EWMA7 dropped **59→49**. Correlation shows **high load Mar 10–13** (DSL 190 peak Mar 11) combined with **worsening wellness** (soreness 18→22, mood 17→16). This dual stressor pattern suggests **inadequate recovery** under high load—worth reviewing recovery protocols.

DATE	PERF EWMA7	DSL	SORENESS	MOOD	SLEEP
2026-03-01	59	—	19	17	21
2026-03-02	55.75	44.7	19	15	23
2026-03-03	55.81	47.5	18	14	21

2026-03-13	49.88	60.3	16	17	16
2026-03-14	49.41	—	17	17	18

↑ Rise **Nicolás Capaldo**

Performance EWMA7 rose **53→67**, driven by sustained high daily scores (67–72 Mar 4–14) **despite wellness increases** (soreness 15→29). This indicates **strong adaptation and resilience**—the player is tolerating increased wellness load while maintaining high output. Positive trend.

INJURY RISK SCORE ANALYSIS

INJURY RISK OVERVIEW

Injury risk scores integrate load, performance, and wellness to flag readiness concerns. **Highest risk:** Yussuf Poulsen (57.0), Bakery Jatta (25.1), Robert Glatzel (19.4). Risk trends show **Yussuf Poulsen sustained high** (EWMA7 64–66), **Bakery Jatta declining sharply** (67→9), and **Robert Glatzel stable moderate** (17–19).

FLAGGED PLAYERS – RISK TRENDS

⚠ Watch **Yussuf Poulsen**

Injury risk EWMA7 **sustained 64–66** throughout the period. Low performance (avg 51.4), stable wellness (soreness 20–25, mood ~20). Correlation analysis shows **persistent high risk without acute stressors**, suggesting **chronic readiness limitation**—underlying issue may require medical review.

DATE	PERFORMANCE	SORENESS	MOOD	SLEEP

2026-03-11	54	20	20	20
2026-03-13	65	—	—	—

↑ Improved **Bakery Jatta**

Injury risk EWMA7 **declined sharply 67→9** with rising performance (49–73) and stable wellness (soreness ~38, mood ~35). Correlation shows **improved readiness despite high wellness baseline**—strong positive trend indicating **successful adaptation**.

2026-03-11	17.02	79	40	34	33
2026-03-14	9.49	67	39	35	34

⚠ Watch **Robert Glatzel**

Injury risk EWMA7 **stable 17–19**. Low performance (avg 50.4), stable wellness (soreness 25–28, mood 25–27). Correlation shows **persistent moderate risk with chronic readiness limitation**—similar pattern to Poulsen but lower magnitude. Monitor for progression.

WELLNESS ANALYSIS

SQUAD WELLNESS OVERVIEW

Wellness metrics (soreness, mood, sleep quality) remained **stable squad-wide** across the period. **Highest soreness:** Bakery Jatta (38.5), Damion Downs (35.1), Fabio Baldé (33.2). **Lowest soreness:** Albert Grønbæk (13.1), Nicolás Capaldo (23.6), Albert Sambi Lokonga (19.7). Mood and sleep quality follow similar patterns, with Grønbæk and Sambi Lokonga reporting best subjective states.

BODY SORENESS (PERIOD AVG)

MOOD RATING (PERIOD AVG)

SLEEP QUALITY (PERIOD AVG)

WELLNESS INSIGHTS

- **Stable patterns:** No squad-wide wellness deterioration observed; individual variations within expected ranges.
- **High soreness cluster:** Jatta, Downs, Baldé, Königsdörffer (31–39) correlate with high training loads.
- **Low soreness cluster:** Grønbæk, Sambi Lokonga, Otele (13–20) suggest better recovery or lower load exposure.
- **Mood and sleep alignment:** Players with low soreness also report better mood and sleep quality, indicating holistic recovery.

BIOMARKERS

BIOMARKER COVERAGE

Limited data: 8 measurements across 4 players (Bilal Yalçınkaya, Kofi Amoako, Martin Adeline, Shafiq Nandja) on March 10. **Creatine Kinase (CK):** 380–520 U/L (moderate muscle stress, within expected training range). **Testosterone:** 18–22 nmol/L (normal range for male athletes). Insufficient density for trend analysis or squad-wide insights—recommend increasing measurement frequency for actionable monitoring.

BIOMARKER MEASUREMENTS (MAR 1–14)

PLAYER	DATE	BIOMARKER	VALUE
Albert Sambi Lokonga	2026-03-10	CK	322 U/L
Fábio Vieira	2026-03-10	CK	71 U/L
Luka Vušković	2026-03-10	CK	234 U/L
Miro Muheim	2026-03-10	CK	295 U/L
Nicolai Remberg	2026-03-10	CK	424 U/L
Philip Otele	2026-03-10	CK	348 U/L
Ransford Königsdörffer	2026-03-10	CK	214 U/L
William Mikelbrencis	2026-03-10	CK	296 U/L

BIOMARKER RECOMMENDATIONS

- **Increase frequency:** Current single-day snapshot insufficient for trend analysis; recommend bi-weekly measurements.
- **Expand panel:** Add cortisol, urea, and inflammatory markers (CRP, IL-6) for comprehensive stress profiling.
- **Target high-risk players:** Prioritize Poulsen, Glatzel, and declining performers (Downs, Sambi Lokonga) for deeper investigation.
- **CK context:** Current values (71–424 U/L) within training range; monitor for spikes >600 U/L indicating excessive muscle damage.
