PERFORMANCE & INJURY RISK SCORES

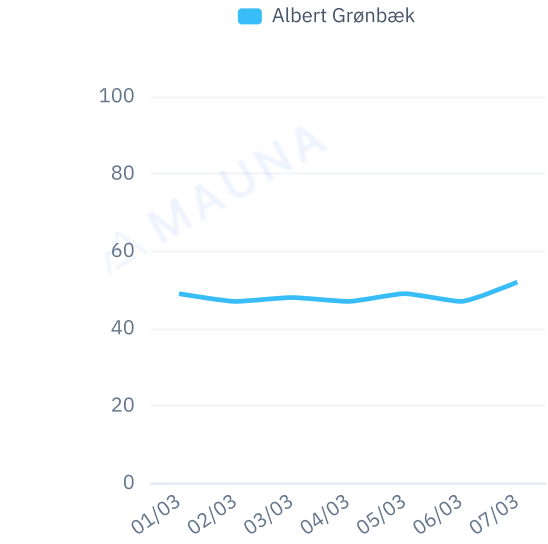

1–7 March 2026

Performance scores show individual variation across the week; team mean overlay with min–max envelope highlights squad bandwidth. Injury risk scores tracked individually; five athletes currently ≥60 warrant review against load and wellness metrics.

MONSTER ENERGY — COMPOSITION

Nutritional reference

MONSTER ENERGY DRINK — 500 ML CAN

Caffeine: 160 mg per 500 mL can — high stimulant load; equivalent to ~2 espresso shots.

Sugar: 54 g per 500 mL — high carbohydrate content; rapid energy spike followed by potential crash.

Other ingredients: Taurine (2000 mg), B vitamins (B2, B3, B6, B12), glucuronolactone, inositol, carbonated water, citric acid, natural flavours, sodium citrate, colour (caramel), preservatives (sorbic acid, benzoic acid).

Timing considerations: Caffeine peak occurs 30–60 minutes post-ingestion; avoid within 4–6 hours of sleep. High sugar content may interfere with sustained performance; consider timing around high-intensity sessions only.

Staff recommendation: Monitor individual tolerance; excessive caffeine (>400 mg/day) may increase anxiety, disrupt sleep, and elevate resting heart rate. Prefer whole-food carbohydrate sources for sustained energy.

BIOMARKERS & TESTING

December 2025

Biomarkers dataset (December 2025) provides baseline reference; no new testing data in the display window. CMJ scores recorded for 24 athletes on 16 December 2025.

WATCH ATHLETES — INJURY RISK

Focus profiles

Five athletes with injury_risk_score ≥60 on latest date; cross-check ACWR EWMA, acute load (EWMA-7), and soreness ratings before concluding readiness. The data below shows wellness markers (25 Feb–7 Mar) for all monitored athletes; staff should review individual load progression and subjective feedback.
