MEDICAL & COACHING BRIEF – WEEK 05 OCT 2026

Club report — MAUNA data only

Mon, 05/10/26 · 2026-09-29 → 2026-10-05

01 ACWR unavailable (insufficient chronic history <21d). Monotony and strain used for load monitoring; Adeline (1.29 monotony, 15,229 strain) and Nadir (17,550 strain) show highest repetitive and cumulative load.

02 GPS intensity leaders: Adeline 2,856 m HSR (top), Muheim 2,698 m (RTP 05 Sep), Remberg 596 decels. Post-RTP athletes (Bornauw, Muheim, Torunarigha) show varied GPS profiles — Muheim high HSR + low wellness = reload spike watch.

03 Wellness flags: Amoako soreness 31.5, mood 28.5 (highest) despite moderate load; Adeline low wellness (16.3, 13.8) + high load + high GPS = converging signal for session review. Correlation matrix shows weak cross-domain links (r<0.2) — domains mostly diverge, requiring individual athlete assessment.

LOAD MONITORING – MONOTONY & STRAIN

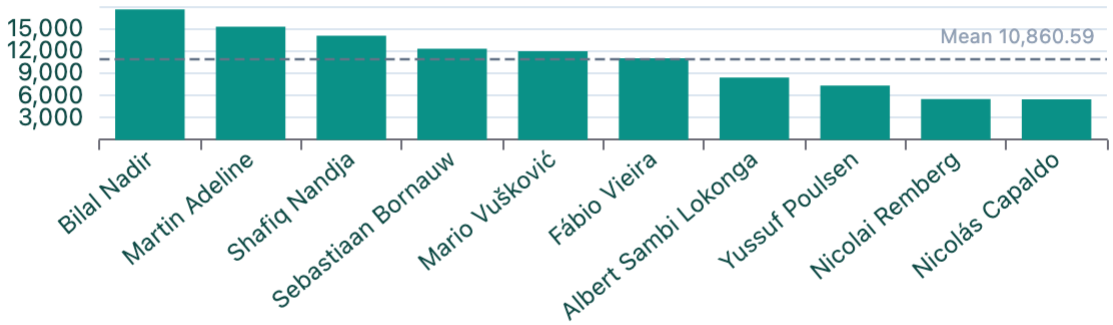

2026-09-29 → 2026-10-05

- ACWR unavailable (insufficient chronic history <21d). Monotony >1.0 = elevated repetitive load; strain combines volume × monotony.
