Reading FC – Weekly Monitoring Report

COACH BRIEF

Fait moi un rapport sur mon equipe de la derniere semaine. Je veux un graph en lignes avec l'evolution de score de performance et de blessures de mes joueurs individuellement, et un graph avec la trend moyenne de l'equipe pour la perf et les blessures aussi avec min et max pour ce graph. Rajoute moi une analyse de la comparaison de la charge externe avec acwr et Ewma de mes joueurs en fonction de leurs positions et compare les entre eux. Fait moi un graph radar des donnees subjectives de mes joueurs du 25 fevrier au 7 mars. Donne moi la composition de la boisson energisante de la Monster. Fait moi le bilan sur les biomarkers/tests/trials de mon club en decembre. Rajoute moi un graph scatter avec le sommeil et le mood . Rajoute moi des fiches individuelles sur les athletes le plus a risques de se blesser prochainement

External load by position, mechanical intensity patterns, and individual high-load profiles during 1–7 October 2026. No performance/injury risk scores, ACWR/EWMA (zero sRPE), sleep, wellness, or biomarker data recorded for the Display period.

NARRATIVE THREAD

- Midfielders recorded the highest external load across all key GPS metrics (mean distance 19,576 m, HMLD 4,116 m), reflecting their central role in coverage and transitions.
- Attackers showed the highest mean explosive distance (1,994 m) and high-speed running (1,511 m), consistent with offensive tactical demands.
- Charlie Savage led the squad in total distance (21,078 m) and HMLD (4,537 m), recording the highest overall external load during the week.

SIGNALS

INFO Led squad in total distance (21,078 m) and HMLD (4,537 m) during 1–7 October 2026, highest external load profile.

Charlie Savage · gps

INFO Highest acceleration count (88.5) during 1–7 October 2026, reflecting high mechanical demand.

TOTAL DISTANCE BY POSITION (M)

HMLD BY POSITION (M)

EXPLOSIVE DISTANCE BY POSITION (M)

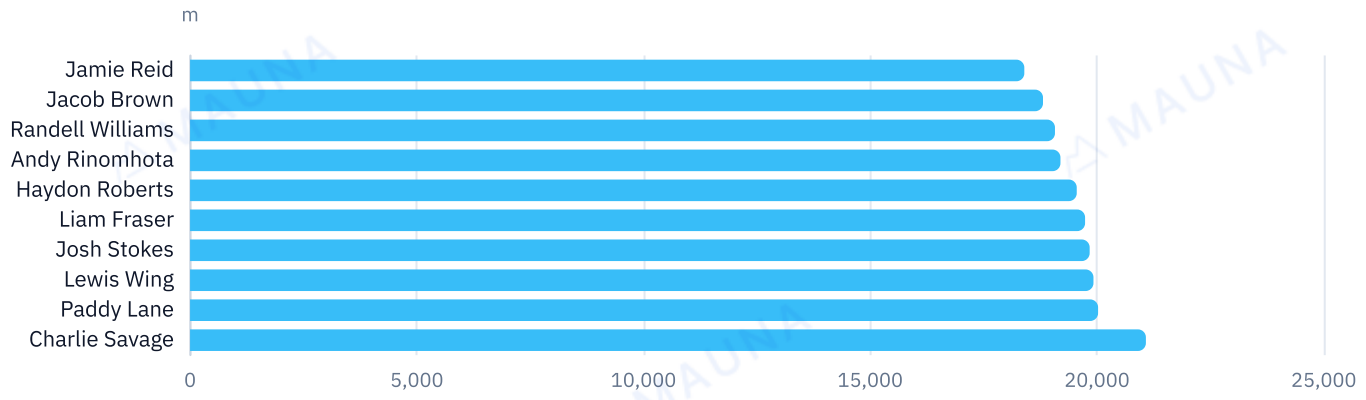

- Midfielders recorded the highest external load across all key GPS metrics during this week. Mean total distance for midfielders reached 19,576 m, with HMLD averaging 4,116 m. Attackers showed the highest mean explosive distance (1,994 m) and high-speed running (1,511 m), reflecting their role in high-intensity offensive actions.

TOP 10 SPRINT DISTANCE (M)

- Charlie Savage led the squad in total distance (21,078 m) and HMLD (4,537 m), recording the highest overall external load volume. Six of the top ten distance performers were midfielders, reflecting positional demands. Haydon Roberts (defender) topped sprint distance with 447 m across 16 sprint efforts, followed by Josh Knight (427 m, 16 sprints) and Daniel Kyerewaa (356 m, 12 sprints). Randell Williams recorded th...

TOP 10 ACCELERATION COUNTS

HIGH SPEED RUNNING BY POSITION (M)

- Mechanical load patterns show Randell Williams with the highest acceleration count (88.5) and Charlie Savage with the highest deceleration count (94). Ashqar Ahmed recorded 81 accelerations and 72 decelerations, indicating elevated change-of-direction demands. Dynamic stress load (DSL) was highest in Haydon Roberts (720) and Randell Williams (686), reflecting combined mechanical and metabolic stress. High-speed ru...

POSITION-SPECIFIC LOAD COMPARISON

2026-10-01 → 2026-10-07

- No injury risk score data was available for 1–7 October 2026. Individual risk profiles and watch-list recommendations cannot be generated without performance and injury risk monitoring data for this window.

HIGH-RISK ATHLETE PROFILES

2026-10-01 → 2026-10-07

- Monster Energy (standard 500 ml can) typically contains approximately 160 mg caffeine, 54 g sugar (sucrose and glucose), taurine (1000 mg), B vitamins (B2, B3, B6, B12), and carbonated water. Caloric content is around 210 kcal per can. Formulations vary by product line (e.g., Zero Sugar, Ultra variants). Staff should refer to product labels for precise ingredient lists and consult with club nutritionists regarding...

ENERGY DRINK COMPOSITION – MONSTER ENERGY

2026-10-01 → 2026-10-07

- No biomarker, test, or trial data was recorded for December 2025. A summary of physiological markers or performance tests cannot be provided for that month.

BIOMARKERS AND TESTS SUMMARY (DECEMBER 2025)

2026-10-01 → 2026-10-07

- No sleep data (duration, quality, efficiency) was recorded for 1–7 October 2026. A scatter plot comparing sleep hours and mood ratings cannot be generated for this window.

SLEEP AND MOOD RELATIONSHIP

2026-10-01 → 2026-10-07

- No subjective wellness data (mood, energy, body soreness, stress ratings) was recorded for 25 February – 7 March 2025. A radar chart comparing athlete profiles cannot be generated for that period.

SUBJECTIVE WELLNESS RADAR (25 FEBRUARY – 7 MARCH 2025)

2026-10-01 → 2026-10-07

- No performance score or injury risk score data was recorded for 1–7 October 2026. Individual evolution charts and team mean trends cannot be generated for this window.

PERFORMANCE AND INJURY RISK SCORES

2026-10-01 → 2026-10-07

- No positive sRPE (RPE × session minutes) was recorded during 1–7 October 2026. ACWR and EWMA formulas require at least one day of internal load data and were not computed for this window. External GPS load (distance, HMLD, sprints) is available above, but internal load monitoring (RPE-based) was not captured this week.

INTERNAL LOAD AND ACWR/EWMA ANALYSIS

2026-10-01 → 2026-10-07

- Midfielders recorded the highest mean total distance (19,576 m) and HMLD (4,116 m), with peak individual values reaching 21,078 m and 4,537 m respectively. Attackers showed the highest mean explosive distance (1,994 m) and high-speed running (1,511 m), consistent with their tactical demands. Defenders maintained moderate external load profiles across all metrics.
