SQUAD MONITORING REPORT – 1–7 MARCH 2026

Sat, 07/03/26 · 2026-03-01 → 2026-03-07

HAMBOURG · PHYSICAL DATA

Squad monitoring report – 1–7 March 2026

COACH BRIEF

Fait moi un rapport sur mon equipe du 1 au 7 mars.

01 · Cover cover

02 · Staff read brief

03 · What the data allows §1

04 · Performance & injury-risk scores – individual evolution §2

05 · Subjective wellness profile (25 Feb – 7 Mar) §3

06 · Sleep quality vs mood §4

07 · Energy drink composition §5

08 · Biomarkers & tests – December 2025 §6

09 · Injury log §7

10 · Individual profiles – highest injury risk §8

STAFF READ

2026-03-01 → 2026-03-07

Staff overview

NARRATIVE THREAD

- Monster Energy drink (original green can, 500ml) typically contains: 160mg caffeine, 54g sugar (sucrose and glucose), taurine (1000mg), B vitamins (B2, B3, B6, B12), inositol, and carbonated water. Energy content is approximately 220 kcal per can. The caffeine and sugar provide the primary energy boost, while taurine and B vitamins support metabolic function. Staff should note that high caffeine and sugar content may affect hydration status and sleep quality if consumed close to training or competition.
- No biomarker or physical test data is available for December 2025 in the current monitoring system. The club's VALD testing and laboratory biomarker protocols may not have been active during that period, or data has not been uploaded to the platform.
- Individual profiles for the five athletes with highest average injury risk scores during 1–7 March 2026. Yussuf Poulsen shows the most elevated risk (mean 63.6/100), followed by Bakery Jatta (43.7/100). These scores reflect the platform's algorithmic assessment based on load, wellness, and readiness data. Staff should review recent training loads, subjective wellness responses, and any reported soreness or fatigue patterns. Elevated risk scores are descriptive signals for monitoring – not diagnostic predictions.

SIGNALS

INFO Monster Energy drink (original green can, 500ml) typically contains: 160mg caffeine, 54g sugar (sucrose and glucose), taurine (1000mg), B vitamins (B2, B3, B6, B12), inositol, and carbonated water. Energy content is approximately 220 kcal per can. The caffeine and sugar provide the primary energy boost, while taurine and B vitamins support metabolic function. Staff should note that high caffeine and sugar content may affect hydration status and sleep quality if consumed close to training or competition.

INFO No biomarker or physical test data is available for December 2025 in the current monitoring system. The club's VALD testing and laboratory biomarker protocols may not have been active during that period, or data has not been uploaded to the platform.

WHAT THE DATA ALLOWS

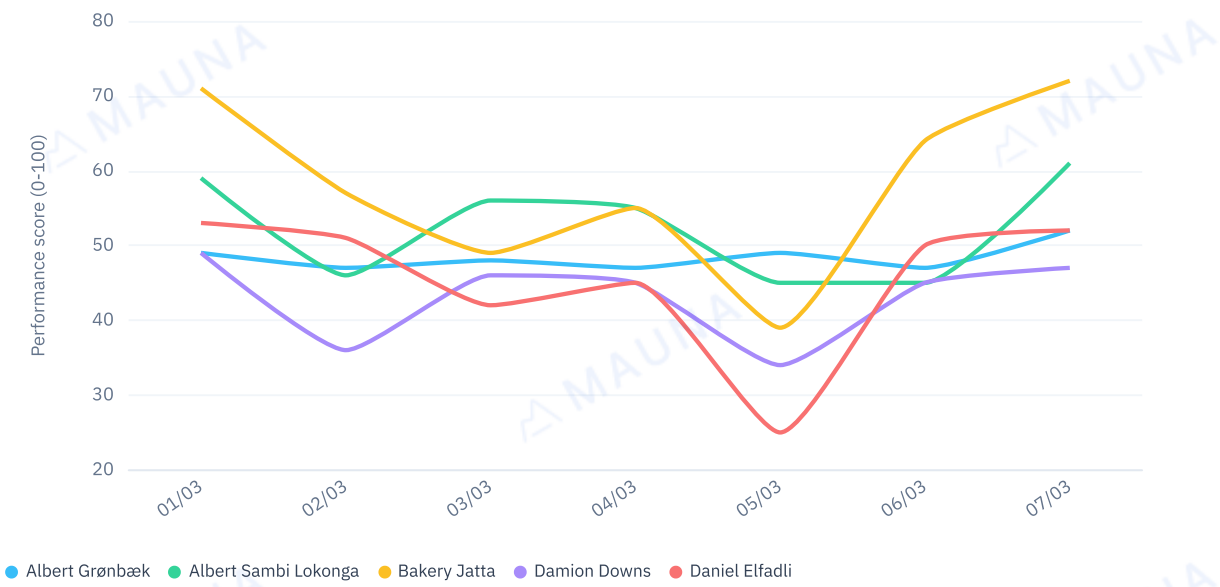

2026-03-01 → 2026-03-07

- Limit: location has no values. Limit: context has no values. Limit: status is constant (recovered) — treat as unreliable. Limit: energy rating has no values. Limit: stress rating has no values. Limit: wellbeing rating has no values. Limit: sleep efficiency percentage has no values. Limit: sleep consistency percentage has no values. Limit: hours in bed has no values. Limit: hours slow wave has no values.

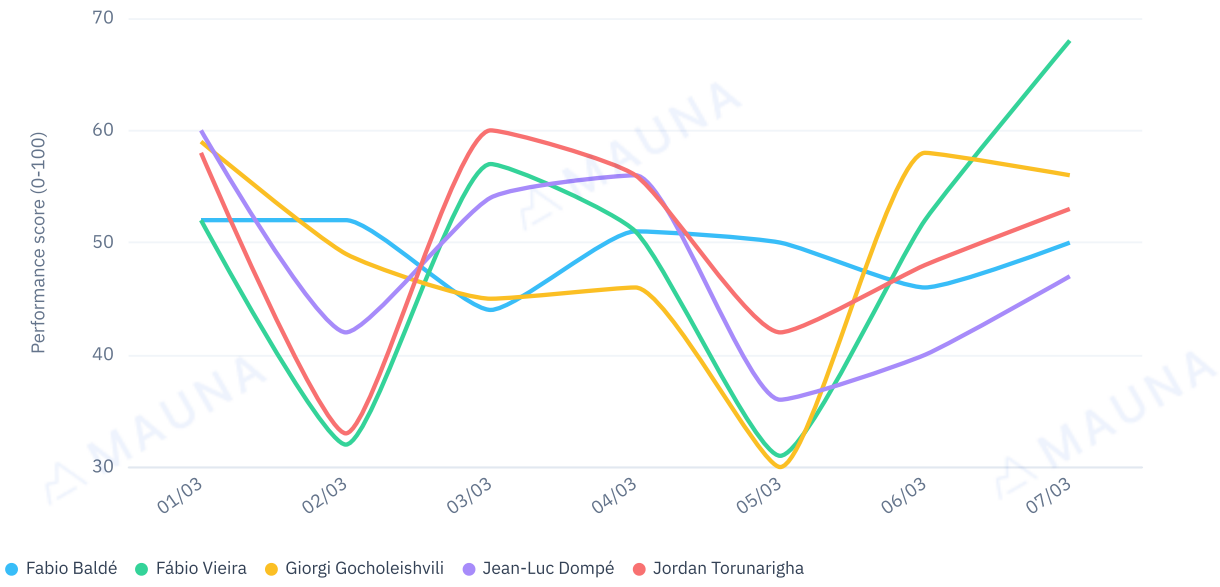

PERFORMANCE & INJURY-RISK SCORES – INDIVIDUAL EVOLUTION

2026-03-01 → 2026-03-07
