TOP 3 – CHARGE GPS VS RÉCUPÉRATION

Identification of the top 3 players showing the greatest discordance between GPS training load (distance, sprints) and recovery indicators (body soreness, mood, performance/injury scores) on March 1st, 2026.

1 mars 2026

DEMANDE DU COACH

Génère un bilan complet de l'équipe sur 1 jour le 1 mars. Je veux voir l'impact de la charge GPS (distance totale et sprints) sur les scores de fatigue et de douleurs musculaires (wellness). Sors-moi uniquement le top 3 des joueurs qui présentent la plus grande discordance (grosse charge mais mauvaise récupération).

VUE D'ENSEMBLE – 1 MARS 2026

4 joueurs

Only 4 players recorded GPS data on March 1st, 2026. All 4 completed similar session durations (~70 minutes) but with varying load intensities and recovery profiles. The three players demonstrate distinct discordance patterns: Grønbæk (high load + poor psychological state), Jatta (moderate load + high injury risk), and Katterbach (high sprint load + moderate wellness).

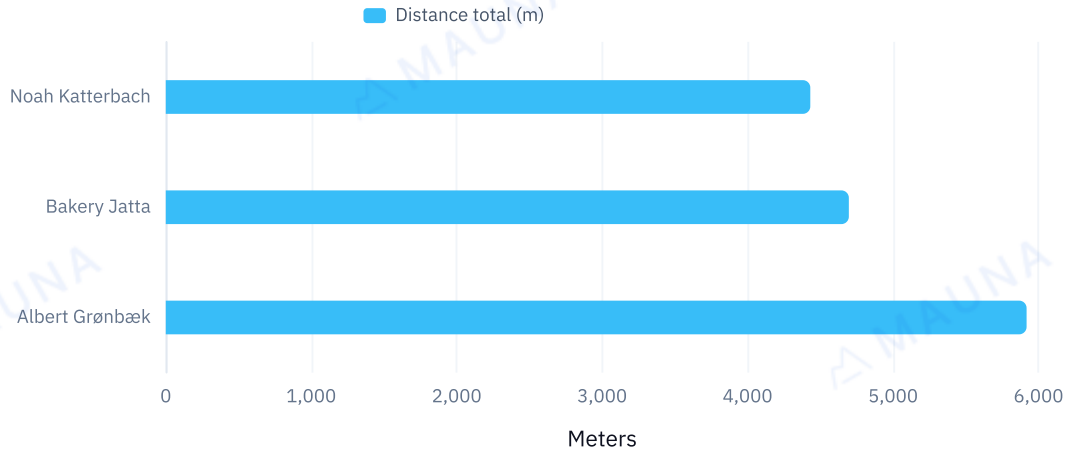

DISTANCE MAX
5,918 m
Albert Grønbæk

SPRINT MAX
130 m
Noah Katterbach

DSL MAX
374.9
Albert Grønbæk

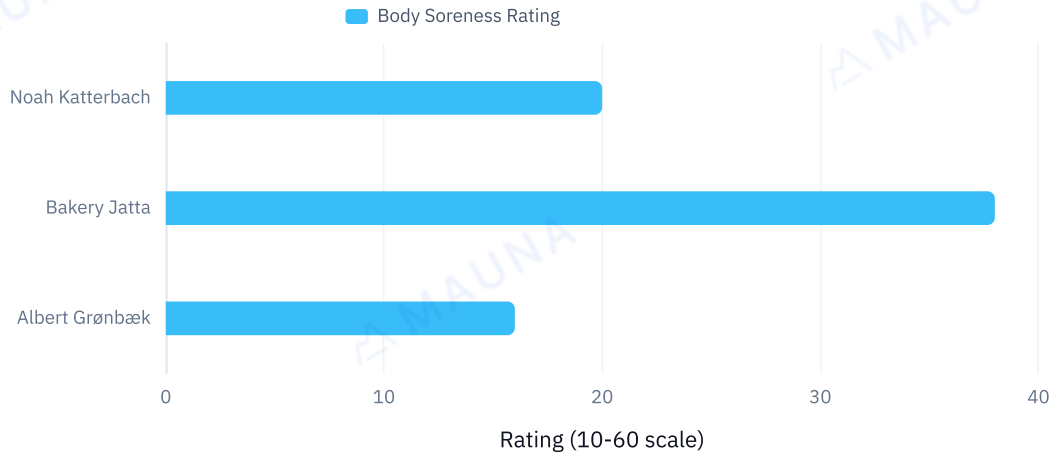

GPS LOAD COMPARISON – DISTANCE & SPRINT DISTANCE

Total distance covered by each player on March 1st — Grønbæk leads with 5,918m, followed by Jatta (4,696m) and Katterbach (4,431m).

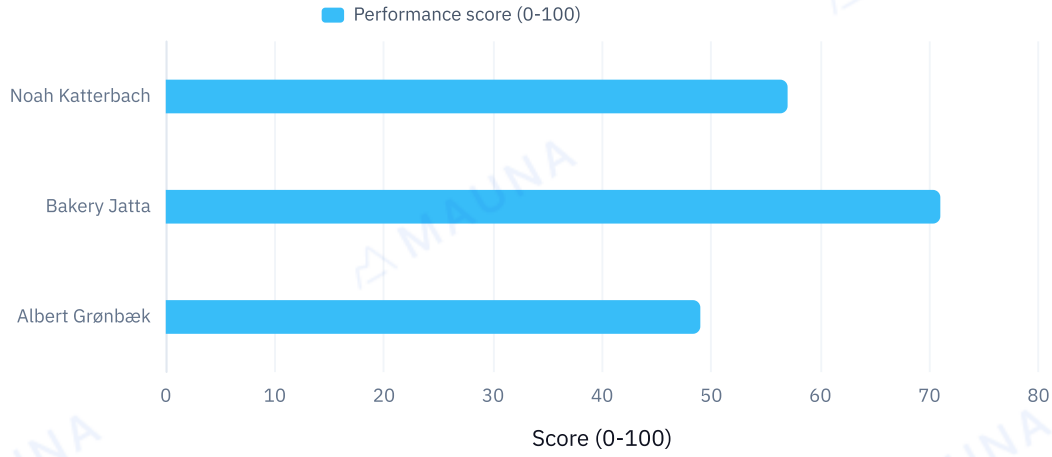

RECOVERY INDICATORS – BODY SORENESS & MOOD

Wellness markers (10–60 scale) — Jatta shows highest body soreness (38), Grønbæk critically low mood (10).

PERFORMANCE & INJURY RISK SCORES

Performance score (0–100) — Jatta leads (71), Grønbæk below average (49). Injury risk: Jatta elevated (67), Katterbach minimal (0).

TOP 3 – GPS LOAD & RECOVERY METRICS (1 MARCH 2026)

Comprehensive view of GPS load, wellness markers, and performance/injury scores for the top 3 discordance cases.

PLAYER	DISTANCE (M)	SPRINT (M)	SPRINTS (#)	DSL	SORENESS	MOOD	PERF. SCORE	INJURY RISK
Albert Grønbæk	5,918	0	0	374.9	16	10	49	3
Bakery Jatta	4,696	119	4	82.4	38	34	71	67
Noah Katterbach	4,431	130	5	77.4	20	36	57	0

ALBERT GRØNBÆK

review

AG

Albert Grønbæk

Winger

REVIEW

Highest GPS load (5,918m, 374.9 DSL) with critically low mood (10/60) and below-average performance score (49/100), despite low body soreness (16/60). Psychological fatigue may not be reflected in physical soreness metrics.

DISCORDANCE PATTERN: Physical load not matched by physical soreness, but poor psychological state. Despite covering the highest distance (5,918m) with significant high-intensity running (463m HSR) and the highest DSL (374.9), Grønbæk's mood rating is critically low (10/60) and performance score is below average (49/100), suggesting psychological fatigue not reflected in physical metrics.

BAKERY JATTA

WATCH

Moderate GPS load (4,696m, 119m sprint) with elevated body soreness (38/60) and high injury risk score (67/100). Good performance score (71/100) may mask underlying recovery issues.

DISCORDANCE PATTERN: Moderate load with disproportionate soreness and injury risk. Jatta completed moderate distance (4,696m) with 119m sprint distance but presents elevated body soreness (38/60) and a high injury risk score (67/100), despite good performance (71/100). The combination of elevated soreness and high injury risk warrants close monitoring despite the good performance score.

Full Back

INFO

Highest sprint exposure (130m, 5 sprints) with substantial HSR (361m). Low body soreness (20/60) and minimal injury risk (0/100), but moderate mood (36/60) and average performance (57/100).

DISCORDANCE PATTERN: High sprint load with moderate wellness, requires careful load management. Katterbach recorded the highest sprint exposure (130m, 5 sprints) and substantial HSR (361m). His body soreness is low (20/60) and injury risk minimal (0/100), but mood is moderate (36/60). The high sprint load combined with moderate wellness indicators suggests careful load management is needed to prevent accumulation.

TEAM OVERVIEW – DISTANCE VS PERFORMANCE SCORE
