LOAD OVERVIEW – ACWR EWMA

29 Jun – 7 Oct 2026

ACWR EWMA tracked daily for all players using exponentially weighted moving averages (7-day acute, 28-day chronic). Individual evolution charts split into four groups show daily fluctuations; values above 1.30 warrant contextual review with session intensity and recovery.

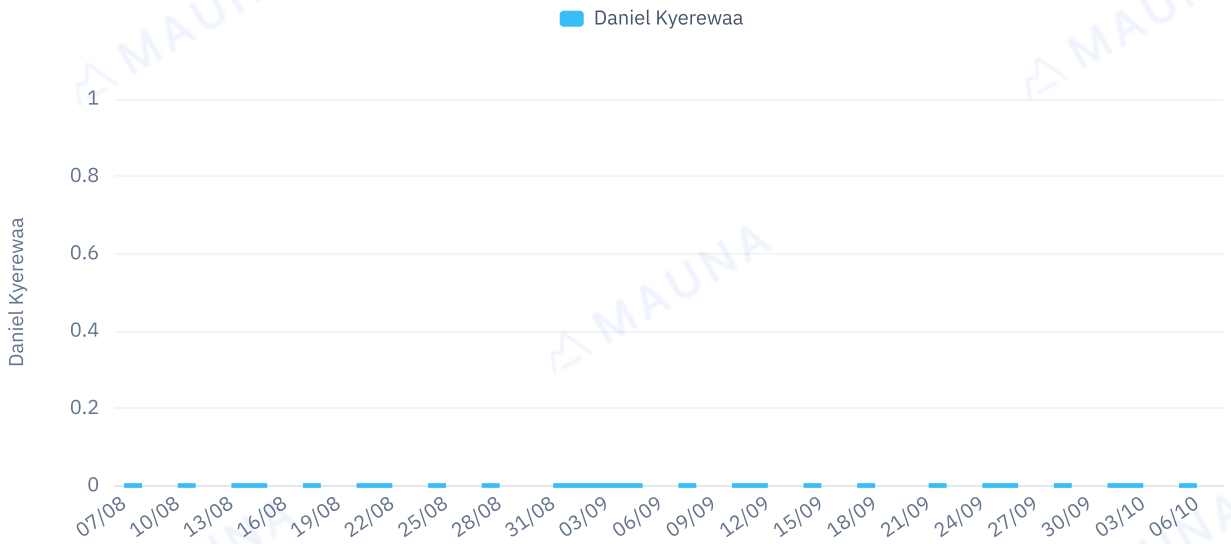

DAILY ACWR EWMA (7:28) – GROUP 1

Exponentially weighted moving average – acute:chronic workload ratio

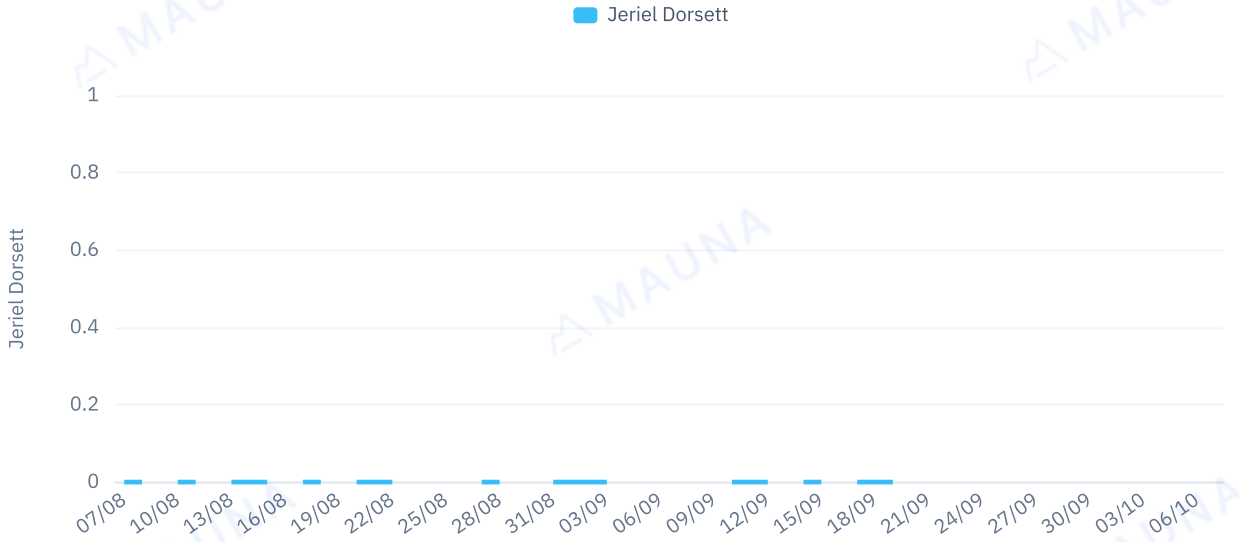

DAILY ACWR EWMA (7:28) – GROUP 2

Exponentially weighted moving average – acute:chronic workload ratio

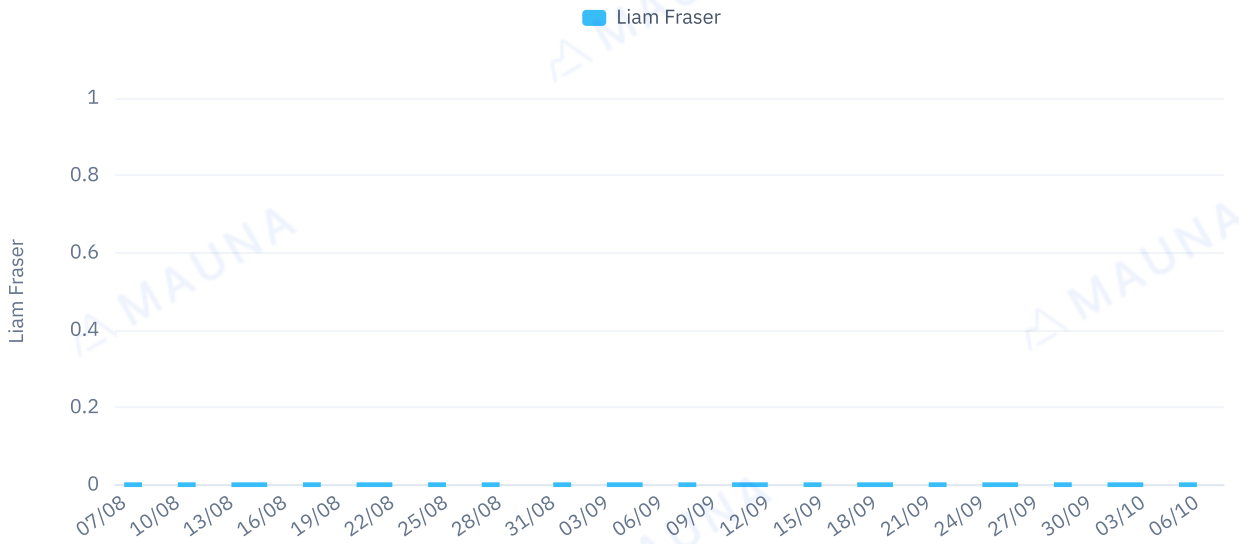

DAILY ACWR EWMA (7:28) – GROUP 3

Exponentially weighted moving average – acute:chronic workload ratio

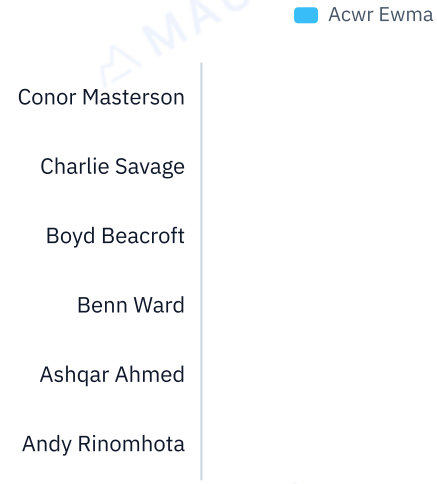

DAILY ACWR EWMA (7:28) – GROUP 4

Exponentially weighted moving average – acute:chronic workload ratio

LATEST ACWR EWMA BY PLAYER (1/2)

GPS INTENSITY METRICS

Z5 & Z6 acceleration

GPS intensity metrics focused on Z5 and Z6 acceleration distance (high-intensity and explosive efforts). Top Z6 performers: Randell Williams (3,575 m), Udoka Malife (3,044 m), Kyreece Lisbie (2,925 m). Z5 volumes also substantial for Daniel Kyerewaa and Benn Ward across the period.

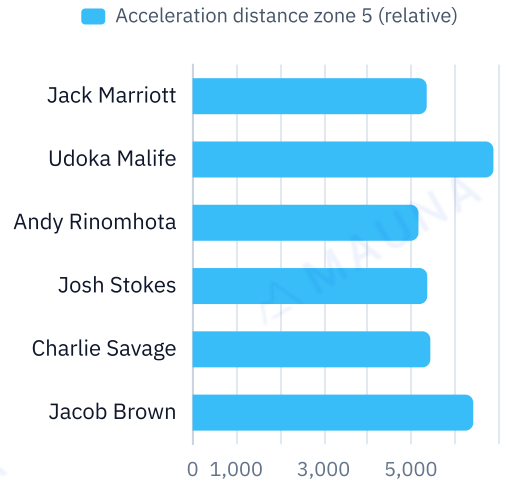

TOTAL Z5 ACCELERATION DISTANCE (1/2)

Period sum – high-intensity acceleration

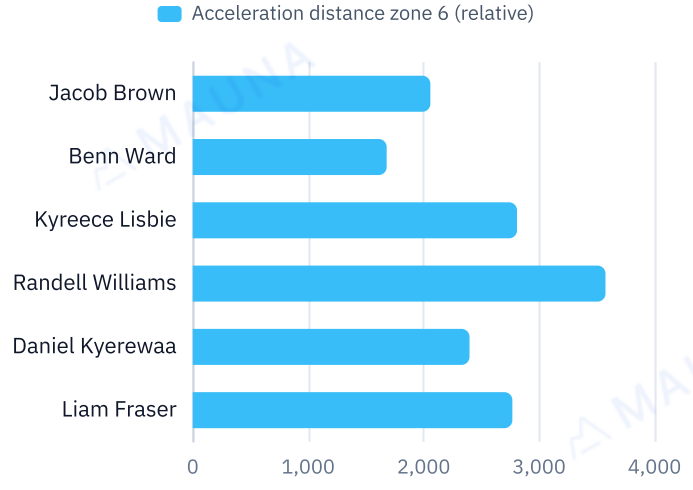

TOTAL Z5 ACCELERATION DISTANCE (2/2)

Period sum – high-intensity acceleration

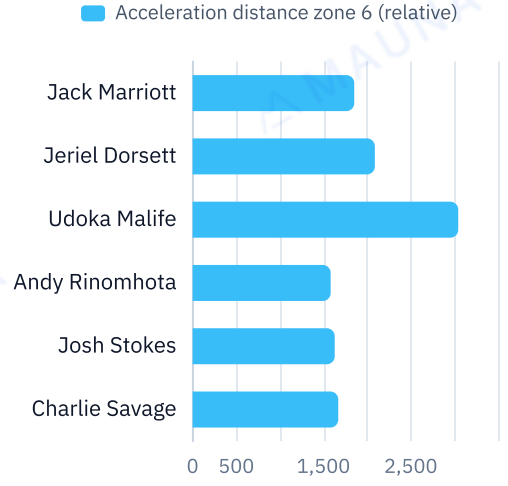

TOTAL Z6 ACCELERATION DISTANCE (1/2)

Period sum – explosive acceleration

TOTAL Z6 ACCELERATION DISTANCE (2/2)

Period sum – explosive acceleration

GPS INTENSITY SUMMARY – Z5 & Z6 ACCELERATION DISTANCE

FOCUS ATHLETES

info

RW **Randell Williams**
Midfielder

Highest Z6 explosive acceleration distance (3,575 m) across the period.

UM **Udoka Malife**
Defender

Second-highest Z6 explosive distance (3,044 m) during the period.
