Hambourg

WEEKLY STAFF REPORT – LOAD (ACWR) & WELLNESS

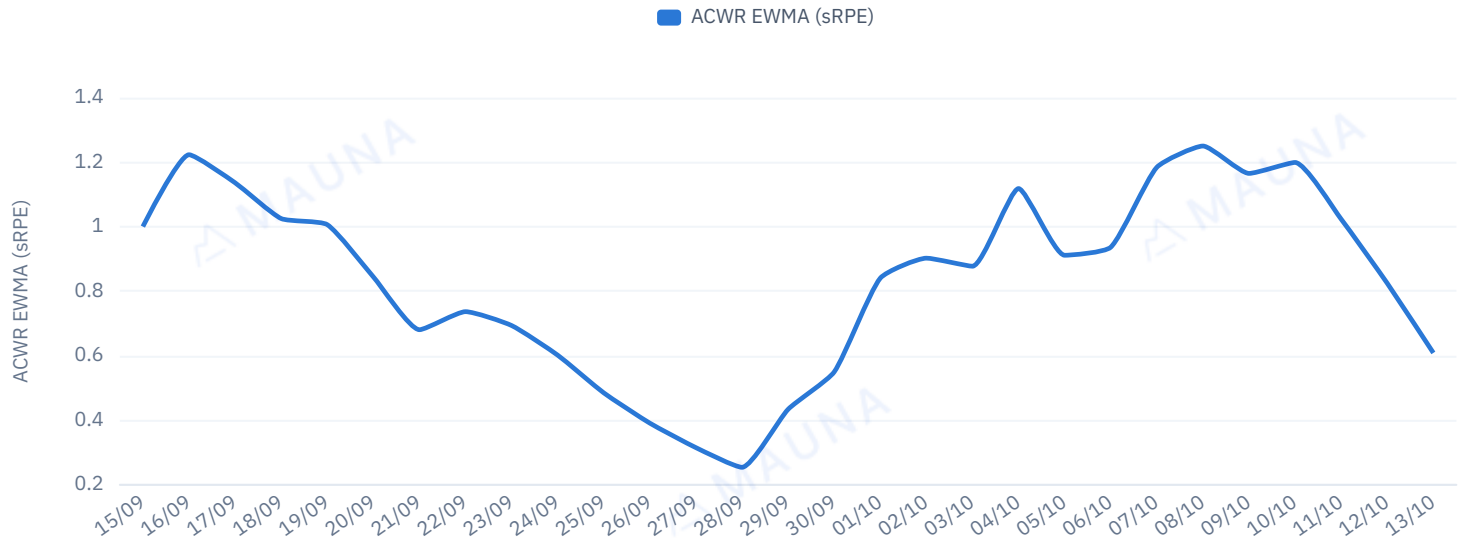

7 – 13 October 2026

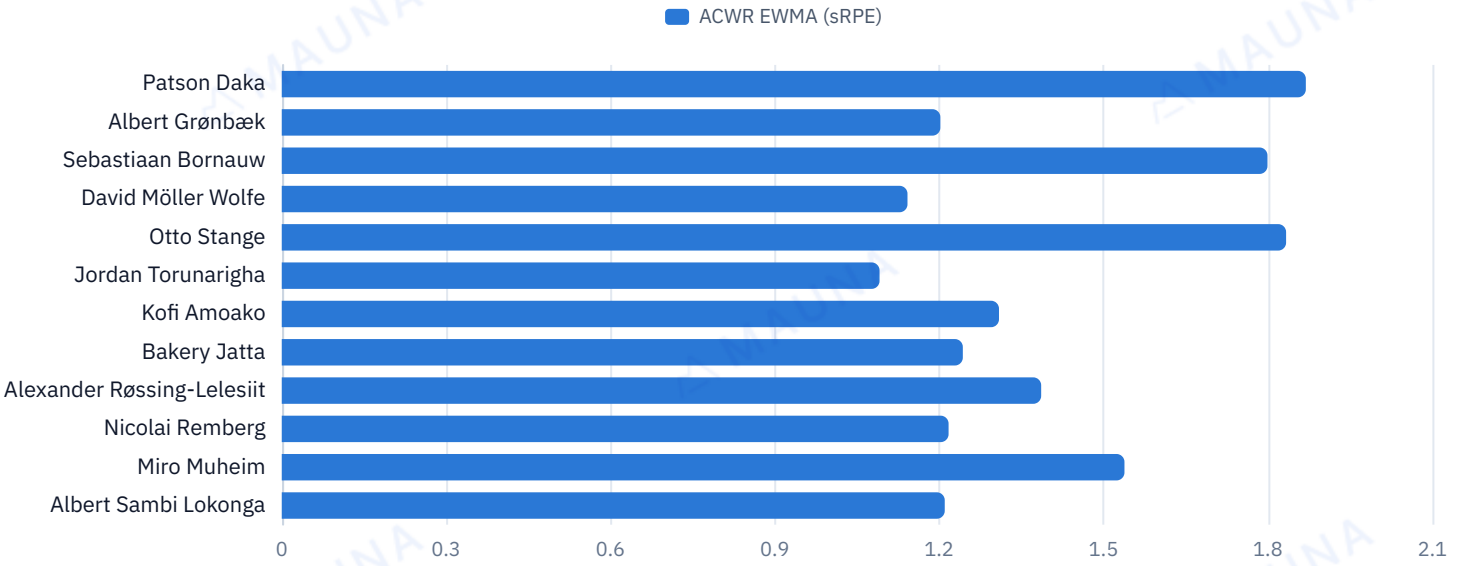

Team load management via ACWR and wellness monitoring (body soreness, mood). Four players show elevated acute:chronic ratios; one reports notably high soreness.

4	0	24.5
PLAYERS WITH ACWR > 1.5	PLAYERS WITH ACWR < 0.8	AVERAGE BODY SORENESS (PERIOD)

LOAD OVERVIEW – ACWR

Team ACWR evolution shows moderate fluctuation around 0.9 across the display period. Four players exceed ACWR 1.5; none below 0.8. Top drivers of injury risk in this club: reported pain/injury status vs usual, total external load change vs yesterday, and 7-day average load.

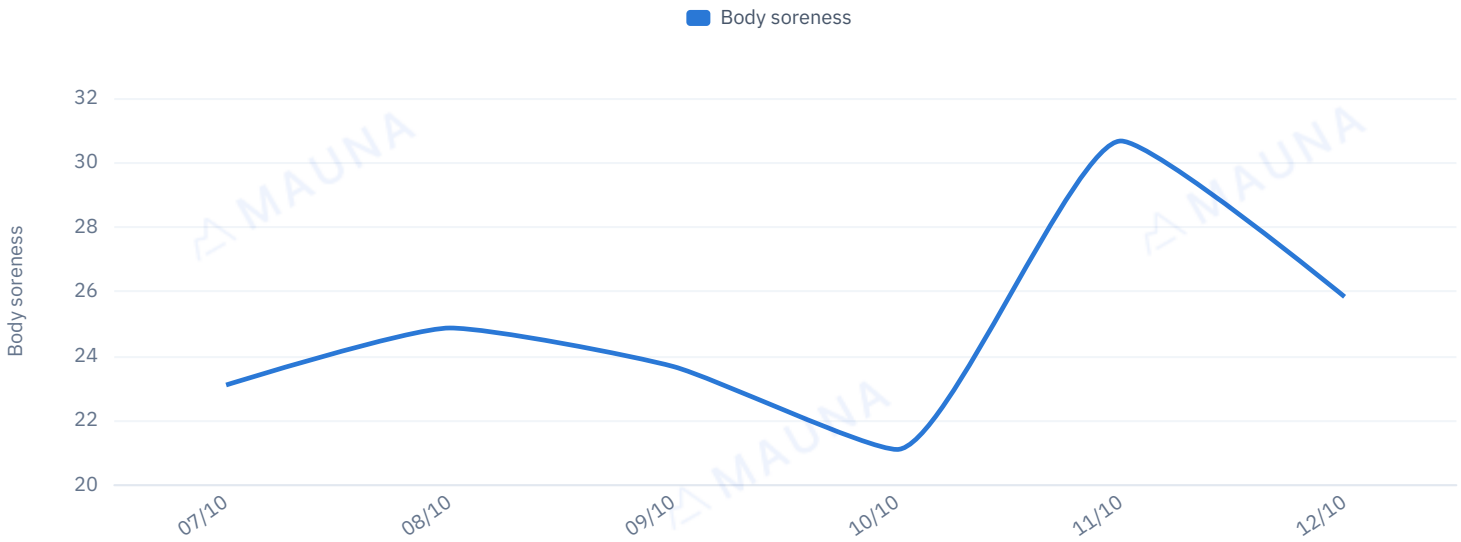

WELLNESS OVERVIEW

Body soreness and mood are the only populated wellness metrics this period. Team soreness averaged approximately 24; most players in the 20–30 range (lower is better on 10–60 scale). Mood variability present across the squad.

Wellness scales: RPE Body 10–60 (lower is better). Sleep quality 10–60 (lower is better).

WATCH LIST – LOAD & WELLNESS

OTTO STANGE

ACWR 1.83 (highest in squad). Recent acute load (EWMA-7: 4327) substantially exceeds chronic baseline (EWMA-28: 2360). Consider load modulation or recovery focus.

MIRO MUHEIM

ACWR 1.54 — above the 1.5 threshold. Acute load (EWMA-7: 4664) elevated relative to chronic (EWMA-28: 3032). Monitor for fatigue or soreness trends.

BAKERY JATTA

Body soreness 40 (highest in squad; scale 10–60, lower is better) and mood 36. ACWR 0.52 suggests low recent load. Worth checking on subjective recovery state.

LATEST ACWR & WELLNESS SUMMARY

PLAYER	ACWR EWMA (SRPE)	BODY SORENESS	MOOD
Albert Grønbæk	—	21.67	10

PLAYER	ACWR EWMA (SRPE)	BODY SORENESS	MOOD
Albert Sambi Lokonga	0.63	26.4	11.6
Alexander Røssing-Lelesiit	0.73	20	20
Bakery Jatta	0.52	40	36
Bilal Nadir	0.69	22	30
Damion Downs	—	—	—
Daniel Elfadli	—	—	—
David Möller Wolfe	0.6	20	10
Emir Sahiti	—	—	—
Fabio Baldé	—	—	—
Fábio Vieira	0.55	20.75	27
Giorgi Gocholeishvili	—	—	—

Table notes: ACWR EWMA (sRPE) mean 0.61, median 0.64 (n=19). Body soreness mean 24.58, median 22.6 (n=23; scale 10–60, lower is better). Mood mean 19.02, median 20 (n=23). Heat cells indicate elevated values.

ACWR (ACUTE:CHRONIC WORKLOAD RATIO)

EWMA method: Exponentially weighted moving average. Acute window (7 days) divided by chronic window (28 days). Values > 1.5 indicate rapid load increase (elevated injury risk); values < 0.8 suggest insufficient training stimulus. Optimal range: 0.8–1.5.
