WEEKLY STAFF REPORT – LOAD & WELLNESS

7 – 13 October 2026

Team load management via ACWR and wellness monitoring (body soreness, mood). Identify players with elevated acute:chronic ratios or notable subjective states.

19
SQUAD MEAN MOOD

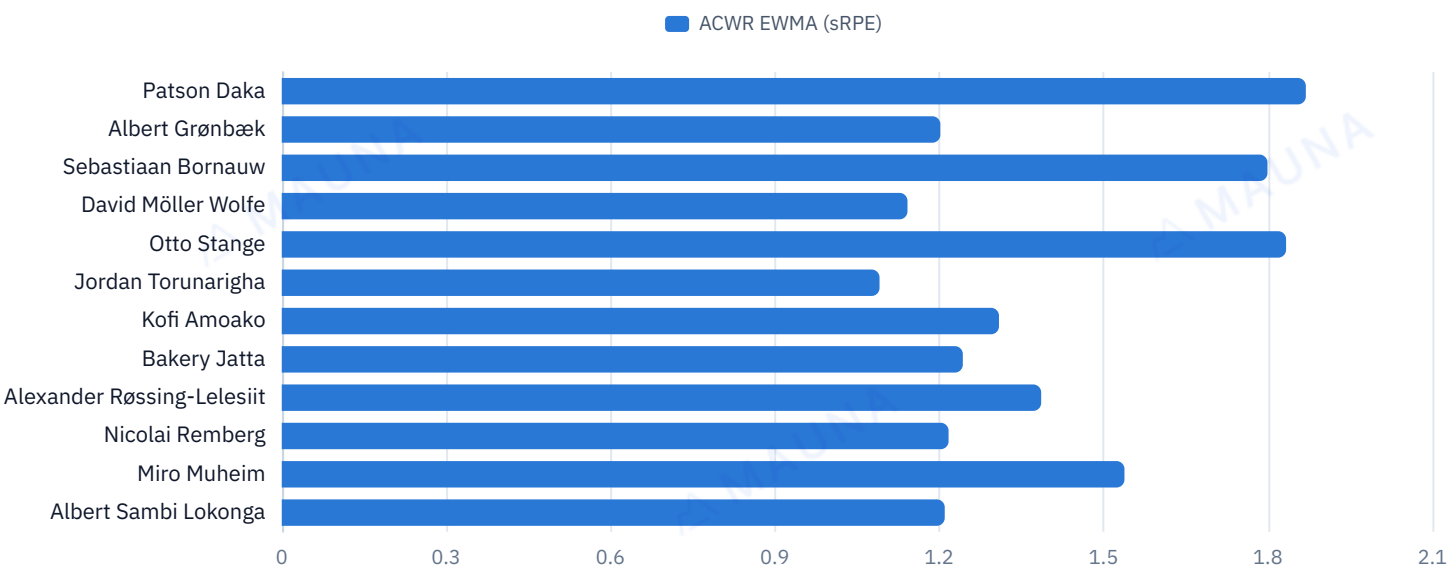

KEY DRIVERS

- Reported pain/injury status vs usual
- Total external load change vs yesterday
- 7-day average external load
- ACWR EWMA (7:28 day ratio) for training-load balance
- Body soreness as the most reliable subjective marker this week

LOAD OVERVIEW – ACWR

Team mean ACWR EWMA trend shows the squad's collective acute:chronic balance over the week. Latest snapshot bar chart highlights individual ACWR values; top 5 table lists players with the highest ratios. ACWR > 1.5 may indicate rapid load increases; < 0.8 may suggest reduced training stimulus. sRPE data quality is limited (71 percent default zeros), so interpret ACWR with caution and cross-reference training logs.

TOP 5 ACWR EWMA

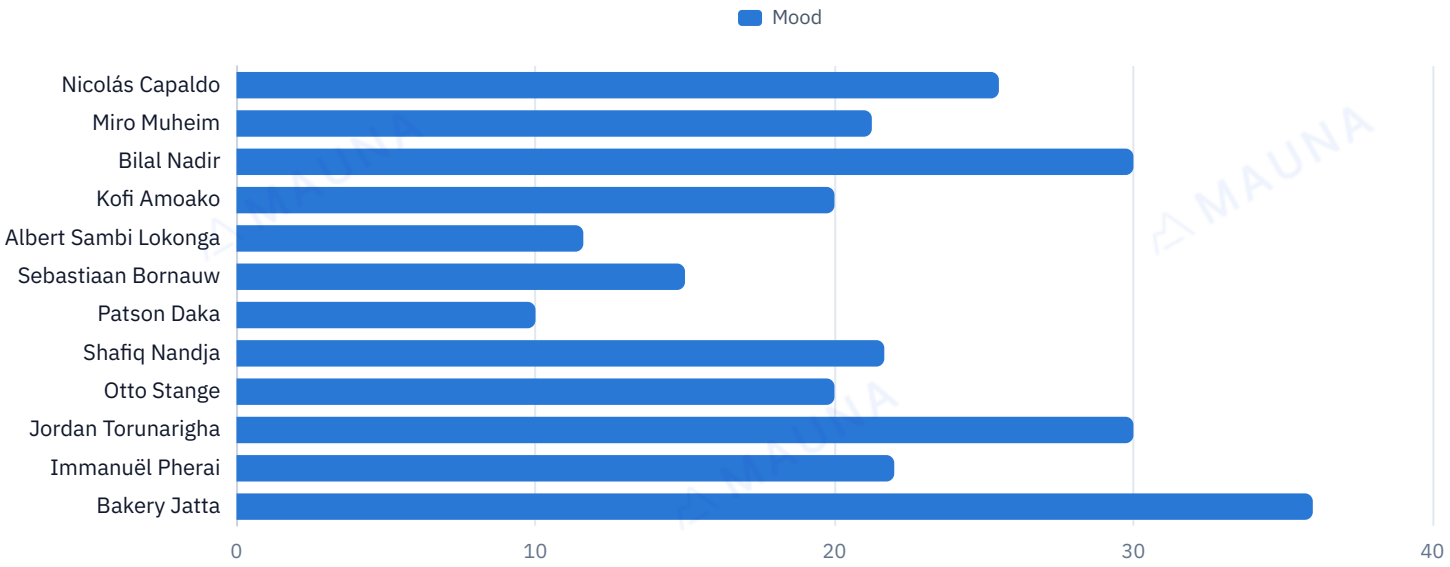

PLAYER	ACWR EWMA (SRPE)	EWMA-7	EWMA-28
Patson Daka	**1.87**	2,399.08	1,283.37
Otto Stange	**1.83**	**4,326.98**	**2,360.3**
Sebastiaan Bornauw	1.8	3,804.69	2,114.71
Miro Muheim	1.54	**4,663.87**	**3,032.32**
Terem Moffi	1.5	1,818.09	1,214.2

Signal: Four players show ACWR values above 1.5, indicating rapid load spikes. Patson Daka (1.87) and Otto Stange (1.83) lead the list. Cross-check with body soreness and recent training schedules.

WELLNESS OVERVIEW

Body soreness and mood are the available subjective markers this week (energy, stress, wellbeing are empty). Average body soreness bar chart shows period means per player; higher scores (closer to 60) indicate greater soreness. Mood averages are also displayed, but note the default pattern in some entries. Body soreness scale: 10–60 (higher is worse).

TOP 5 BODY SORENESS

PLAYER	BODY SORENESS	MOOD
Bakery Jatta	40	36
Immanuël Pherai	30	22
Jordan Torunarigha	30	30
Otto Stange	30	20
Shafiq Nandja	30	21.67

Signal: Body soreness ratings vary across the squad. Bakery Jatta (40.0) shows the highest average soreness, followed by Immanuël Pherai (30.0). May reflect recent high-intensity sessions or incomplete recovery.

INDIVIDUAL WATCH LIST

Players with ACWR outside 0.8 to 1.5 deserve closer review: check recent session RPE entries and training volume. Players in the top 5 body soreness list may benefit from recovery interventions or load adjustments. Cross-domain signals (load spikes + elevated soreness) are particularly worth monitoring. No biomarker data are included per club policy.

WATCH LIST – LOAD & WELLNESS

PLAYER	ACWR EWMA (SRPE)	BODY SORENESS	MOOD
Patson Daka	1.87	–	–
Otto Stange	1.83	30	20
Sebastiaan Bornauw	1.8	–	–
Miro Muheim	1.54	–	–
Terem Moffi	1.5	–	–
Bakery Jatta	–	40	36
Immanuël Pherai	–	30	22
Jordan Torunarigha	–	30	30
Shafiq Nandja	–	30	21.67

Cross-domain note: Otto Stange appears on both lists (ACWR 1.83 + body soreness 30), warranting immediate review.
